

**WHAT IS CLAIMED IS:**

1. A patent transport, comprising  
a support surface, for supporting a patient,  
a base below said support surface, said base having a bottom,  
a first pair of wheels, said pair of wheels having a ground engaging surface, and  
said pair of wheels having a first position with said ground engaging surface above said base bottom and a second position with said ground engaging surface below said base bottom.
2. The patient transport of claim 1, further comprising  
a second and third pair of wheels attached to said base bottom.
3. The patient transport of claim 1, wherein  
said support surface has a first horizontal position and a second chair position.
4. The patient support of claim 2, wherein  
said first pair of wheels are larger than said second and third pair of wheels.
5. A patient support, comprising  
a base, said base having a first pair of wheels and a second pair of wheels,  
a support surface supported by said base,  
said base having a first position and a second position, said base supported by said first pair of wheels in said first position and supported by said second pair of wheels in said second position.

6. The patient support of claim 5, wherein  
said second pair of wheels is larger than said  
first pair of wheels.

7. The patient support of claim 5, further comprising  
a third pair of wheels attached to said base.

8. The patient support of claim 7, wherein  
said first pair of wheels and said third pair of  
wheels are the same size.
